

Thales SafeNet Trusted Access (STA) and Canopus Services Ltd.

Background

Canopus is an insurance and underwriting services provider. Their diverse clientele across many industries and regions requires that their data always remain confidential.

Security Concerns

Access security is top priority and the company is concerned by potential credential compromise and securing access in hybrid environments. These concerns led Canopus Services Ltd to evaluate and ultimately select Thales SafeNet Trusted Access (STA) to address the challenges of securing access to cloud and on-premises apps and services, overcoming password weaknesses, and complying with regulations.

Use Cases

Canopus Services Ltd uses Thales SafeNet Trusted Access (STA) to protect cloud services (IaaS, SaaS, and PaaS) and virtualized environments. The end users that use STA for secure access include remote and roaming employees as well as consultants and contractors.

Benefits

SafeNet Trusted Access has helped Canopus Services Ltd to reduce the risk of breach while successfully implementing cloud transformation initiatives and enabling remote and hybrid work models. The multiple authentication options supported by SafeNet Trusted Access were very beneficial to Canopus as they enable support for different types of users with diverse authentication needs – in this case remote employees as well as consultants. Canopus's positive experience using SafeNet Trusted Access was underscored by the fact they found it easy to implement. Several key features were very beneficial to Canopus Service Ltd.

These include:

- Multiple authentication options
- Automated token provisioning
- User-initiated token enrollment
- Conditional access

As a result of using SafeNet Trusted Access, Canopus Services Ltd were able to achieve their access security goals effectively and reduce the risk of breach, making SafeNet Trusted Access a service they can rely on for authentication. Thanks to SafeNet Trusted Access, Canopus expect to undergo successful cloud transformation initiatives and enable remote and hybrid work models.

"SafeNet Trusted Access is a service we can rely on for authentication."

This case study of Canopus Ltd is based on a February 2022 survey of Thales SafeNet Trusted Access (STA) customers by TechValidate, a 3rd-party research service.
